

## Project Information

- Source: BBC
- Article: What is the best way to learn a new language?
- Author: Krupa Padhy
- Source Language: English
- Target Language: Turkish
- AI Systems: Gemma, DeepL
- Task: AI translation evaluation and human post-editing.

## Translation Quality Evaluation

AI Model: Gemma

- Meaning Accuracy: 5
- Fluency: 4
- Terminology: 4
- Context: 4
- Style: 5
- Grammar/QA: 4
- Overall: 4,3/10

## AI Model: DeepL

- Meaning Accuracy: 6
- Fluency: 7
- Terminology: 6
- Context: 7
- Style: 7
- Grammar/QA: 7
- Overall: 6,7/10

## My PE

- Meaning Accuracy: 8
- Fluency: 8
- Terminology: 8
- Context: 9
- Style: 8
- Grammar/QA: 9
- Overall: 8,3/10

## AI Translation Comparison

I compared the outputs of two AI translation systems, Gemma and DeepL, and then post-edited the translation to improve accuracy, fluency, terminology, contextual appropriateness and overall quality.

## Selected Post-Editing Examples

### Example 1:

Gemma: dikişlerinde patlarken

DeepL: her yerinden taşmaya başladığı o gün

My PE: zar zor sığdığımız

Why I changed it: The expression "to burst at the seams" was translated too literally. My translation better fits the context and sounds more natural in Turkish.

### Example 2:

Gemma: hırçın Hindi dizileri

My PE: basit ve yapmacık Hint dizileri

Why I changed it: The word "cheesy" was translated somewhat differently from its intended meaning. In Gemma's output, "Hindi" was also rendered in a way that could be understood as the Turkish word for "turkey", creating a misleading meaning in context.

Example 3:

Gemma: Başlangıçta görevlerin neyle ilgili olduğunu bilerek söylemedim.

DeepL: Görevlerin neyle ilgili olduğu bana başlangıçta kasıtlı olarak söylenmedi.

My PE: Başlangıçta görevlerin neyle ilgili olduğu bana kasıtlı olarak söylenmemişti.

Why I changed it: Gemma introduced a subject mismatch, while both AI outputs rendered the tense too literally. I adjusted the sentence to make the subject relationship and tense more natural in Turkish.

## Example 4:

Gemma: daldırma ortamları

DeepL: daldırma ortamları

My PE: doğal dil öğrenme ortamları

Why I changed it: The phrase "under immersion settings" was translated too literally by both AI systems. I adapted it to "doğal dil öğrenme ortamları" to better convey the intended message in Turkish.

## Overall Reflection

In this project, I compared the English-to-Turkish outputs of Gemma and DeepL and evaluated their performance across six quality criteria. In this sample DeepL required less post-editing and performed better in fluency, contextual accuracy, and grammar/QA, while Gemma required more substantial corrections. The comparison also showed that both systems can produce similar literal translations, highlighting the importance of human post-editing for context-sensitive expressions.

## Skills Demonstrated

- AI Translation Evaluation
- Machine Translation Post-Editing
- English-Turkish Localization
- Contextual Adaptation
- Terminology Management
- Fluency and Naturalness Editing
- Grammar and QA
- Comparative Evaluation of AI Translation Systems
